

# PRIORITISE EFFICIENCY WITH REAL-TIME INFORMATION SHARING

## ENABLE CONNECTED OFFICERS THROUGH INTEGRATED PRONTO AND BODY-WORN CAMERA TECHNOLOGY

In today's environment, ensuring our police officers spend as much time on the streets and in the community as possible is a priority. Reduce the administrative burden and provide real-time information in the field through a body-worn camera and Pronto digital policing integration.

### HOW IT WORKS

From booking-on to going home, your Pronto digital policing application is there to provide real-time information at your fingertips, whilst reducing the administrative burden faced by all officers, allowing you to respond to situations quicker and more effectively by reducing duplication. Integrating this intuitive solution with body-worn cameras means that video footage can be captured, viewed, tagged, linked with an incident and shared, all from the officer's hand-held device. Enable swift evidence sharing and evaluation, reduce the time spent at the station, and streamline incident management while remaining in the community.

### KEY BENEFITS

#### EASE OF USE

Utilising body-worn cameras is made even more simple when integrated with Pronto, by removing the need to log into the VideoManager back-end system, or searching siloed systems, officer hours can be saved.

#### LINK, MARK AND TAG IN THE FIELD

Manage footage captured on a body-worn camera in the field using your Pronto application, and by mandating field population within Pronto, evidence gathered is better and more likely to be retained according to policy.

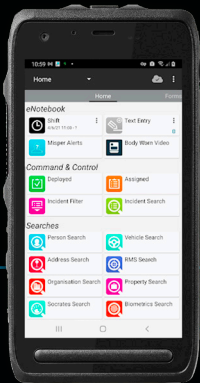

#### QUICKER INVESTIGATIONS

Enable a better experience for victims of crime by enabling quicker investigations and prisoner handling whilst ensuring that cases are not delayed due to video evidence being incorrectly marked and therefore unavailable for trial.

## KEY PRODUCTS AND FEATURES

### PRONTO

The Pronto digital policing application replaces the officer's traditional paper notebooks they currently carry with them, and instead enables them to reuse information and directly fill in and submit reports on their mobile devices and record data and images in compliance with criminal justice requirements - all without having to return to the station, keeping officers on the streets for longer.

### BODY-WORN CAMERAS

Maintain the trust of your community by capturing secure, unbiased video evidence of every interaction. Our VB400 body-worn cameras are designed specifically for police, with a rugged exterior, long battery life and evidence-quality security; they're an essential tool for providing transparency within the community.

## ENABLE THE CONNECTED POLICE OFFICER WITH MOTOROLA SOLUTIONS

We're connecting technologies to provide a safer, more transparent policing environment. Our mission-critical ecosystem unifies video, software and communications on a single platform to amplify collaboration and connectivity between technology and teams. By integrating the Pronto digital policing application with body-worn cameras, we're improving the experience of users and enabling a more efficient front-line police force that is present, visible and effective.
