

USE CASE GAS LEAK

Safe Oil & Gas

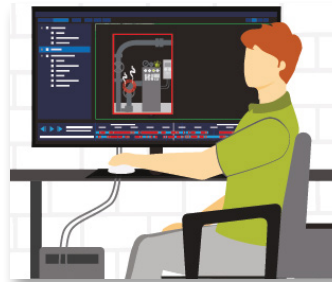

Operational View

DETECT

GAS LEAK ALERT

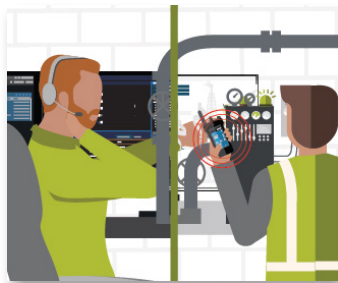

An alarm detects a gas leak and security and operations personnel automatically receive an alert on their radios.

ANALYZE

LEAK ALERT VERIFIED

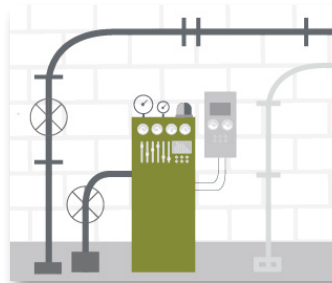

The security operations center receives the alert and verifies the location of the gas leak.

COMMUNICATE

SECURITY SUPPORT

The agents at the security checkpoint are informed about the situation and a technical professional is sent to provide an immediate resolution.

RESPOND

SITUATION RESOLVED

The gas leak is controlled, operations resume without injury or damage due to the timely detection of the situation.
